

DUSTLOCK

Functional chemical dust suppressant and water extender that is non-hazardous, non toxic & fully biodegradable.

Use - Dustlock reduces dust levels and water usage at low concentrations improving site safety & health risks.

Product Information

Dustlock is a formulation of liquid surfactants designed to be sprayed onto unsealed roads and surfaces to improve water penetration and bind fine surface particles preventing the creation of airborne dust.

Benefits from using Dustlock are reduced costs from less water cartage and grader requirements. The low concentrations required and good solubility of the product make for economical and easy use. Dustlock will not harm machinery and is fully biodegradable.

Typical Dilution Rate is 1:1000 though dilution rates are varied depending on site conditions and compaction / suppression objectives. Dustlock has a cumulative effect resulting in fewer applications over time.

Typical Properties

| | |
|-----------------|---|
| DG Class: | Non Dangerous Good / Non Hazardous Good |
| Appearance: | Opaque green liquid |
| pH (Undiluted): | 7.0 - 8.0 |
| Density: | 1.03 - 1.04 kg/L |
| Solubility: | Emulsifies |
| Flash point: | >100°C |

Product Codes / Quantities

| | |
|------------|------------------------------------|
| QCS-DL/200 | 200L Plastic |
| QCS-DL/IBC | 1,000L Intermediate Bulk Container |
